DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-4 are rejected under 35 U.S.C. 102(b) as being anticipated by US 6,626,857 to Ohta et al.

In the specification and figures, Ohta discloses the apparatus as claimed by applicant. In particular, Ohta discloses an extracorporeal circulation apparatus with blood vessel connections 10, 11, pump 5, heparin supply unit 18 for adding therapeutic substances, refill or replacement fluid supply 22, blood filtration unit 13, and membrane oxygenator 28 with oxygen supply, all connected by various conduits (see FIGS 1, 3). In FIG 1, oxygenator is disclosed as being located downstream of the pump 5. In the embodiment shown in FIG 5, oxygenator in the form of drip chamber 9, is located upstream of filter 40.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claim 5 is rejected under 35 U.S.C. 103(a) as being unpatentable over US 6,626,857 to Ohta et al, as applied above, in view of US 4,828,543 to Weiss et al.

In the specification and figures, Ohta discloses the apparatus substantially as claimed by applicant, with the exception of an oxygen tank and a CO₂ outlet for the membrane oxygenator 28. Weiss discloses an extracorporeal blood treatment system with a blood inlet 134, outlet 136, and membrane oxygenator with an O₂ tank 276 as the oxygen supply and a CO₂ outlet 150 in order to drain spent oxygen and CO₂ from the oxygenator. Therefore, it would have been obvious to someone of ordinary skill in the art at the time the invention was made to substitute a tank as disclosed by Weiss for the oxygen supply disclosed by Ohta, since both devices supply oxygen to the device, as well as to add an outlet as disclosed by Weiss to the oxygenator as disclosed by Ohta in order to provide a means for venting CO₂ and unused O₂, as taught by Weiss.

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure:

- a. US 5,858,238 McRea et al
 - i. Salvage of blood with filtration and oxygenation
- b. US 2002/0077581 A1 Davidner et al
 - ii. Body fluid circulation system with replacement fluid, filter, and oxygenator
